— *Introduction*

A choice between credited or non-credited programmes

Credited

Our credited mobility student programmes allow students to earn academic credits by studying at our institution. It's an opportunity to gain valuable educational experience, broaden horizons, and explore new cultures while progressing towards one's academic goals. Upon successful completion of the programme, the credits earned are recognised and transferable to the student's home institution.

Non-credited

Our non-credited mobility student programmes enable students to experience academic and cultural exchange at our institution. Unlike credited programmes, the non-credited courses taken typically do not contribute to the student's academic credits at their home institution. Instead, they focus on personal and cultural enrichment, fostering cross-cultural understanding, and broadening students' global perspectives.

To participate in any of our mobility programmes, please contact the International Centre, details are on the back of this brochure.

STUDENT EXCHANGE

At UniSZA, we've curated a robust international student experience through partnerships with various universities worldwide. This collaboration enables students to engage in a semester-long or even year-long exchange programme, typically lasting one to two semesters. During this time, students from different countries come to study at UniSZA, while our students get the opportunity to study at partner universities abroad.

This exchange isn't just about academics; it's a chance for students to immerse themselves in a new culture, broaden their perspectives, and gain valuable international exposure. The programme is designed to encourage collaboration between faculties, fostering an environment where ideas and knowledge flow seamlessly across borders. The mobility programme is structured to ensure that credits earned are recognised, ensuring that students don't miss out on progress towards their degrees.

The international student experience at UniSZA is incredibly valuable. To participate in the many credited exchange programmes on offer, contact the International Centre or any of our twelve faculties directly to get details on how and when you can begin your exchange with us. The International Centre is here to assist inbound students with their visa application ensuring everyone a rewarding educational experience.

Craft technology

A credited mobility student programme is an educational initiative that allows students to earn academic credits while studying at another institution, often in a different city or even country. It's a unique opportunity for students to expand their academic horizons, gain exposure to diverse teaching methods, and immerse themselves in new cultures.

Throughout the programmes, students not only study in a new academic environment but also have the chance to explore and engage with a different cultural context. This immersive experience not only broadens their academic knowledge but also enhances their global perspective and cross-cultural competency.

Upon successful completion of the programme, students receive credits that count toward their degree back at their home institution. Credited mobility programmes offer a valuable blend of academic enrichment, cultural immersion, and personal growth, making them a highly sought-after opportunity for students eager to broaden their horizons and enhance their educational journey.

Credited programmes

Community service

Collaborative work with local and marginalised communities to deal with communal issues and contribute to well being (1 credit)

Faculty of Applied Social Sciences (FSSG)

This course focuses on community development and the well-being of local and marginalised communities found in Terengganu. Through a combination of various activities such as seminar, site visit and community activity, the students and participants will be exposed to the way of life, culture and values of the local communities.

This 2 week course, which can be offered in blended mode, is an inbound credited mobility programme which provides the opportunity for participants to work collaboratively with communities to deal with communal issues. In addition, this course aims to contribute to a community's well-being.

At the end of this course, students and participants are expected to learn new knowledge and expand awareness, as well as discover contemporaneous community related issues in order to appreciate the diversity of global culture and values in the real world setting.

Refugee crisis

A universal challenge and the roles of Southeast Asian nations in addressing this issue (1 credit)

The Faculty of Law and International Relations (FUHA)

This course will expose participants to the latest issues surrounding refugees in Southeast Asia through a series of modules which include gender and refugees, international humanitarian assistance, media issues, and the protection and social integration of refugees to name but a few.

Refugee issues are a strong area of interest within the Faculty of Law and International Relations, and there are notable experts on refugee and humanitarian issues in the Department of International Relations. This 2 week course can be offered in blended mode.

Biodiversity

Integrate interpersonal skills in order to identify local biodiversity (1 credit)

Faculty of Bioresources and Food Industry (FBIM)

This 2 week course is an inbound credited mobility course under the Bachelor of Agrobiotechnology with honours programme. It exposes students to local biodiversity, including plants, insects, fishes, and aquatic ecosystems.

Participants earn 1 credit after the completion of this course which will be conducted in both face-to-face and blended learning. Through various activities such as practicals and field trips, the students and participants are exposed to the nature of the local surroundings. Students and participants are expected to learn new knowledge and expand awareness-related issues to appreciate local biodiversity.

Islam and contemporary society

Integrating interpersonal skills in order to identify the Islamic practice in local society (1 credit)

Faculty of Islamic Contemporary Studies (FKI)

This 2 week course is an inbound credited mobility programme under the Faculty of Islamic Contemporary Studies. It exposes students to Islamic practice in local society and includes astronomy, mosque organisation, prophetic medicine, harmonisation in religion and Islamic psychospiritual values. Conducted in both face-to-face and blended learning, participants will earn 1 credit after the completion of this course.

Applied data analytics

Construct big data solutions by using appropriate data analytics techniques (1 credit)

Faculty of Informatics and Computing (FIK)

This 2 week course is part of the Bachelor of Computer Science (Software Development) with Honours degree programme. Students will gain a foundational comprehension of key data analytics principles, learn how to create and interact with dashboards, and master basic data management techniques. Armed with these abilities and insights, participants will be able to assist businesses in a variety of industries in making more informed, data-driven decisions.

Craft technology

Comprehensive knowledge and practical skills in the creation of craft products (1 credit)

Faculty of Innovative Design and Technology (FRIT)

This course is an inbound credited mobility programme which is designed to provide learners with comprehensive knowledge and practical skills in the creation of craft products. The course covers the entire design process, starting from ideation and conceptualisation, and guides learners through the manufacturing stages of using wood and 3D printing techniques. Students will gain experience in producing craft products. The course concludes with a post-mortem evaluation, allowing learners to reflect on their work and further refine their craftsmanship. By the end of this course, students will be equipped with basic skills to produce unique and visually appealing craft items while incorporating the principles of design and manufacturing.

Non-credited programmes

01 Edutourism packages

02 Citizen Science: AVIFAUNA

03 sa.èng

Non-credited mobility student programmes are a valuable educational experience that allow students to temporarily study at our institution, without the primary goal of earning academic credits that contribute to their degree requirements at their home institution.

In non-credited mobility programmes, the emphasis shifts towards personal and cultural enrichment. Participants have the chance to step outside their familiar academic environment and engage with a new educational context. They can explore different teaching methods, interact with professors and students from diverse backgrounds, and gain exposure to unique academic perspectives.

Moreover, these programmes offer an excellent opportunity for cultural immersion. Students get to experience life in a different cultural setting, learn about local customs, traditions, and languages, and develop a broader global perspective.

It's a chance to grow personally, become more adaptable, and foster cross-cultural understanding. While the courses taken during non-credited mobility programmes may not directly contribute to a student's academic transcript, the overall experience can be immensely enriching.

Students often return home with a deeper understanding of the world and themselves, possess enhanced intercultural skills, and gain a newfound appreciation for the value of diverse educational experiences. These programmes are a testament to the holistic nature of education at UniSZA, emphasising not just what is learned in the classroom but also the personal growth and intercultural competence gained through immersion in different academic and cultural environments.

PACKAGE 1

Traditional cuisine

FACULTY OF HEALTH SCIENCES (FSK)

PROGRAMME NAME

Traditional Terengganu
Healthy Food & Lifestyle
Experience

Citizen Science

AVIFAUNA

Introduction to Wildlife Conservation

Citizen science is scientific research that is conducted with the participation of members of the public who are not professional scientists. It is a collaborative effort between scientists and volunteers who contribute their time, skills, and resources to collect, analyse, and interpret scientific data.

Citizen science projects can cover a wide range of topics, such as environmental monitoring, ornithology, astronomy, biodiversity, and more. Citizen science can provide valuable contributions to science while empowering and engaging the public in the scientific process. Contact the International Centre to find out more about this unique experience.

***Fees will vary depending on the duration of this customisable programme.**

— sa.èng

sa.èng

/saɛŋ/ • noun

a favoured companion, a person attached to another by feelings or personal affection, a friend.

Customisable mobility programme

Sa.èng is a fully customisable mobility programme designed to provide a group of students with a flexible and personalised educational experience tailored to the group's unique interests, academic goals, and preferences.

***Fees vary depending on duration of stay and selection of experience.**

FIRST

Duration of stay

In a customisable mobility student programme, the group has the freedom to shape their own learning journey. Start by clarifying duration of stay by thinking about what the group hopes to achieve, and the projects or experiences that align with the group's academic and personal aspirations. It's an educational adventure you can truly make your own.

SECOND

Types of experience

Next, you have the freedom to create a personalised programme. The group can choose activities from a diverse range of subjects and decide whether you want to focus on learning language, cultural immersion activities or both.

Check the International website for details.
